                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequences 255552-255560 and 255561-255566 represent cDNA sequences encoding canine interleukin-13 (IL-13) clones 80 and 78 respectively. The invention relates to canine conferince conference of feline Flt-3 ligand, canine or feline CD40, canine or feline CD154 (CD40 ligand), canine IL-5, canine IL-13, feline interferon-alpha (IRN-alpha) and feline granulocyte macrophage colony-stimulating factor (GGCSF), and nucleotides which encode these interferon-alpha (IRN-alpha) and feline granulocyte macrophage colony-stimulating factor (GGCSF), and nucleotides which encode these inmunoregulatory proteins. The proteins, their associated nucleic acids, specific antibodies and inhibitors may be used as vaccines for therapeutic or prophylactic regulation of an immune response in animals (particularly cats, dogs, horses and humans). They may be used to treat autoimmune or infectious diseases including allerates, inflammation and graft rejection, and to increase the response from a co-administered antigen. The nucleotide sequences can also be used for the recombinant production of a protein, while nucleotide fragments are useful as probes, as amplification primers and as sources of inhibitory therapeutics (e.g., antisense oligonucleotides). The proteins may be used to raise antibodies and to screen for modulators of activity, while the antibodies may be used in detection, and also the contraction of activity, while the antibodies may be used in detection, and also the contraction of activity.

```
conquences encoding canine interleukin-13 (IL-13) clones 80 and 78 respectively. The invention relates to canine and 78 respectively. The invention relates to canine conformed for a ligand, canine or feline CD154 (CD40 19gand), canine IL-15, canine IL-13, feline interferon alpha (IFN-alpha) and feline granulocyte macrophage colony-stimulating factor (GMCSF), and nucleotides which encode these immunoregulatory proteins. The proteins, their associated nucleic acids, specific antibodies and inhibitors may be used as vaccines for therapeutic or prophylactic regulation of an immune response in animals (particularly cats, dogs, horses and humans). They may be used to treat autoimmune or infectious diseases including allerajes, thmours, inflammation and graft rejection, and to increase the response from a co-administered antigen. The nucleotide sequences can also be used for the recombinant production of a protein, while
                                                                                                                                                                                                                                                            Nucleic acids encoding immunoregulatory proteins from cats or dogs, useful for treating or preventing e.g. tumors or autoimmune disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequences 25552-255560 and 255561-255566 represent cDNA

nucleotide fragments are useful as probes, as amplification primers and as sources of inhibitory therapeutics (e.g., antisense oligonucleotides). The proteins may be used to raise antibodies and to screen for modulators of activity, while the antibodies may be used in detection,

Sequences 25552-25560 and 255561-25566 represent cDNA.

Sequences encoding canine interleukin-13 (IL-13) clones 80

and 78 respectively. The invention relates to canine

IL-4, canine or feline Fit-3 ligand, canine or feline CD40, canine or

IL-4, canine or feline Fit-3 ligand, canine IL-13, feline

CL interferon-alpha (IRN-alpha) and feline granulocyte macrophage

CC interferon-alpha (IRN-alpha) and feline granulocy interferon

CC response in animals (particularly cats, dogs, horses and humans).

CC They may be used to treat autoimmune or infectious diseases including

CC an also be used for the recombinant production of a protein, while

CC an also be used for the recombinant production of a protein, while

CC an also be used for the recombinant production of a protein, while

CC as sources of inhibitory therapeutics (e.g., antisense oligonucleotides).

CC The proteins may be used to raise antibodies and to screen for

CC modulators of activity, while the antibodies may be used in detection,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ò
                                                                                                                                                                                                              Sequences 255552-255560 and 255561-255566 represent cDNA sequences encoding canine interleukin-13 (IL-13) clones 80 and 78 respectively. The invention relates to canine of and 78 respectively. The invention relates to canine or feline CD154 (CD40 ligand), canine IL-5, canine IL-13, feline interferon-alpha (IFN-alpha) and feline granulocyte macrophage interferon-alpha (IFN-alpha) and feline granulocyte macrophage colony-stimulating factor (GMCSF), and nucleotides which encode these inneries specific antibodies and inhibitors may be used as vaccines for therapeutic or prophylactic regulation of an immune response in animals (particularly cats, dogs, horses and humans). They may be used to treat autoimmune or infectious diseases including alley may be used to treat autoimmune or infectious diseases including also be used for the recombinant production of a protein, while nucleotide fragments are useful as probes, as amplification primers and as sources of inhibitory therapeutics (e.g., antisense oligonucleotides). The proteins may be used to raise antibodies and to screen for and in drun targetting, while the antibodies may be used in detection,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    444 TCTGAAATTTCCATGGCGATAAACTCCCCTTACATAGGTGAGCAGGTTTTTCACCAACTG 385

The invention relates to canine and 78 respectively. The invention relates to canine or felline CDL4, canine or felline CDL5 (CD40 ligand), canine IL-3, canine IL-13, felline construction or felline CDL5 (CD40 ligand), canine IL-5, canine IL-13, felline construction or felline CDL5 (CD40 ligand), canine IL-5, canine in IL-3, felline colony-stimulating factor (GMCSF), and nucleotides which encode these colony-stimulating factor (GMCSF), and nucleotides which encode these immunoregulatory proteins. The prophilactic regulation of an immune response in animals (particularly cats, dogs, horses and humans). They may be used to treat autoimmune or infectious diseases including the response from a co-administered antigen. The nucleotide sequences can also be used for the recombinant production of a protein, while a sources of inhibitory therapeutics (e.g., antisense oligonucleotides). The proteins may be used to raise antibodies and to screen for modulators of activity, while the antibodies may be used in detection,

ö
           response in animals (particularly cats, dogs, horses and humans).

They may be used to treat autoimmune or infectious diseases including allergies, tumours, inflammation and graft rejection, and to increase the response from a co-administered antigen. The nucleotide sequences can also be used for the recombinant production of a protein, while nucleotide fragments are useful as probes, as amplification primers and as sources of inhibitory therapeutics (e.g., antisense oligonucleotides). The proteins may be used to raise antibodies and to screen for modulators of activity, while the antibodies may be used in detection,
                                                                                                                                                                                                                                                                      113 ggcttttgagagcacagtgctttcagcatcctctgggtcctttggatggcgctgcagtcg 172

T lymphocytes were induced by phorbol-2-myristate-3-acetate (PMA) and phytohaemaglutinin (PHA). Poly (A)+ RNA was isolated from the cells and reverse transcribed to cDNA. The CDNA was subjected to hybridisation with polyA RNA from the monkey kidney cell line (COS3. DNA specific for peripheral blood mononuclear cells (PBMC) (i.e. which did not hybridise) was cloned in PSE1 to construct a DNA bank. The bank was screened with cDNA prepared from PBMC which had been stimulated with PMA (and opt.PHA) and with a mixture of clong colliquous specific to other cytokines. One positive clone (i.e. which hybridised more strongly to cells induced with PHA and PMA, c.f. PMA alone, and did not hybridise to known cytokine (i.e. which hybridised more strongly to cells induced with PHA and PMA, c.f. PMA alone, and did not hybridise to known cytokine two potential ATG initiation codons and four potential signal capavage sites. A second positive clone differed only in the identity of codon 41 which was GGC (Gly) in stead of GAC (Asp).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    63 teactteaattttggtgteteggetgegtteaetggaaa---teeetgeegggetttt 119

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Seguence 40,

Funding for cattle EST sequencing was provided by the USDA National Research Initiative, Animal Genome Resource Grant AG 99-3205-8534 for H. A. Lewin and J. E. Womack. Base Calling/Quality Scores: PHRED from Washington University Genome Center. Vector Trimmi g: Cross_match from Washington University Genome Center PHRAP suite. This sequence is vector free and at least 200 bp in length.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

Funding for cattle EST sequencing was provided by the USDA National Research Initiative, Animal Genome Resource Grant AG 99-3205-8534 for H. A. Lewin and J. E. Womack. Base Calling/Quality Scores: PHRED from Washington University Genome Center. Vector Trimmi g: Cross_match from Washington University Genome Center PHRAP suite. This sequence is vector free and at least 200 bp in length.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

       Sequences V58221-V58222 and Y58223-Y58224 represent encoded and mature canine interleukin-13 (IL-13) clones 80 and 78. The invention relates to canine IL-4, canine or feline Fit-3 ligand, canine or feline CD40, canine or feline CD40, canine or feline CD40, canine or feline CD40, canine or feline GD40, canine or feline GD40, and foline granulocyte macrophage colony-stimulating factor (GMCSF), and nucleotides which encode these immunoregulatory proteins. The proteins, their associated nucleic acids, specific antibodies and inhibitors may be used as response in animals (particularly cats, dogs, horses and humans). They may be used to treat autoimmune or infectious diseases including
                                                                                                                                                                                                          allergies, tumours, inflammation and graft rejection, and to increase the response from a co-administered antigen. The nucleotide sequences or an also be used for the recombinant production of a protein, while nucleotide fragments are useful as probes, as amplification primers and as sources of inhibitory therapeutics (e.g., antisense oligonucleotides). The proteins may be used to raise antibodies and to screen for modulators of activity, while the antibodies may be used in detection,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                61 MYCAALESLINVSDCSAIQRTQRMLKALCSQKPAAGQISSERSRDTKIEVIQLVKNLLTY 120

                                         Sequences Y58221-Y58222 and Y58223-Y58224 represent encoded and mature canine interleukin-13 (IL-13) clones 80 and 78. The invention relates to canine interleukin-13 (IL-13) clones 80 and 78. The invention relates to canine or feline Fil-13 ligand, canine or feline CD40, canine or feline CD54 (CD40 ligand), canine IL-5, canine IL-13, feline interferon-alpha (IFN-alpha) and feline granulocyte macrophage colony stimulating factor (GMCSF), and nucleotides which encode these nucleic acids, specific antibodies and inhibitors may be used as vaccines for therapeutic or prophylactic regulation of an immune response in animals (particularly cats, dogs, horses and humans). They may be used to treat autoinmune or infectious diseases including allergies, tumours, inflammation and graft rejection, and to increase
                                                                                                                                                                                                                                               the response from a co-administered antigen. The nucleotide sequences can also be used for the recombinant production of a protein, while nucleotide fragments are useful as probes, as amplification primers and as sources of inhibitory therapeutics (e.g., antisense oligonucleotides) The proteins may be used to raise antibodies and to screen for modulators of activity, while the antibodies may be used in detection,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          61 MYCAALESLINVSDCSAIQRTQRMLKALCSQKPAAGQISSERSRDTKIEVIQLVKNLLTY 120

Sequences Y58221-Y58222 and Y58223-Y58224 represent encoded and mature canine interleukin-13 (II-13) clones 80 and 78. The invention relates to canine interleukin-13 (II-13) clones 80 and 78. The invention relates to canine IL-4, canine Or feline CD40, canine or incleic matching for the CD55, and nucleotides which encode these immunoregulatory proteins. The proteins, their associated nucleic acids, specific antibodies and inhibitors may be used as vaccines for therapeutic or prophylactic regulation of an immune response in animals (particularly cats, dogs, horses and humans). They may be used to treat autoimmune or infectious diseases including They may be used to treat autoimmune or infectious diseases including the response from a co-administered antigen. The nucleotide sequences can also be used for the recombinant production of a protein, while as sources of inhibitory therapeutics (e.g., antisense oligonucleotides). The proteins may be used to raise antibodies and to screen for modulactors of activity, while the antibodies may be used in detection,

Sequences Y58221-Y58222 and Y58223-Y58224 represent encoded and mature canine interleukin-13 (IL-13) clones 80 and 78. The invention relates to canine IL-4, canine or feline FIt-3 ligand, canine or feline CD54 (CD40 ligand), canine IL-5, canine IL-13, feline interferon alpha (IFN-alpha) and feline granulocyte macrophage colony-stimulating factor (GMCSF), and nucleotides which encode these immunoregulatory proteins. The proteins, their associated nucleic acids, specific antibodies and inhibitors may be used as vaccines for therapeutic or prophylactic regulation of an immune response in animals (particularly cats, dogs, horses and humans). They may be used to treat autoimmune or infectious diseases including
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                allergies, tumours, inflammation and graft rejection, and to increase the response from a co-administered antigen. The nucleotide sequences can also be used for the recombinant production of a protein, while nucleotide fragments are useful as probes, as amplification primers and as sources of inhibitory therapeutics (e.g., antisense oligonucleotides). The proteins may be used to raise antibodies and to screen for modulators of activity, while the antibodies may be used in detection,

                                        An approx. 400 bp DNA fragment derived from a Pst/PvuII restriction digest of the mouse P600 cDNA clone was isolated. This fragment, which encompasses most of the coding region of the mouse P600 cDNA, was radioactively labelled and hybridised with filter lifts prepd. from a cDNA library made from a clone of an AlO T cell line. One clone, designated PA 10.66, was subcloned into M13 and sequenced. This sequence encodes human IL-13.

                                                                                                                                         A novel cytokine produced by T lymphocytes induced by phorbol-2-mayistate-3-acetate and phytohaemaglutinin was coded for by the sequence in clone pSEI-NC30. A second clone was also identified (pSEI-NC30bis) which differed only in the identity of codon 41. The corresponding proteins differ in the amino acid at position 41 which is either Asp (in NC30) or G1y (in NC30bis). The cytokine acts on monocytes and B lymphocytes and is useful in treatment of tumours and some infections and inflammatory conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This protein is one of two possible forms of a new cytokine produced by T lymphocytes induced by phorbol-2-myristate-3-acetate and phytohaemaglutinin. The proteins differ only in the amino acid

They are obtd. by site-directed mutagenesis of natural II-13 sequences. The muteins antagonise the activity of IL-13 or IL-4. They have partial cytchine agonist activity, exhibit less than 80% maximal agonist activity of natural II-2, and/or antagonize cytchine activity by least about 50% when present at a 100-fold excess. They and other cytchine muteins (see also R92790-92, R92795-802) are useful in the screening of

                                                                                                                                                                                              digest of the mouse P600 cDNA clone was isolated. This fragment, which encompasses most of the coding region of the mouse P600 cDNA, was radioactively labelled and hybridised with filter lifts prepd. from a cDNA library made from a clone of an AlO T cell line. One clone, designated PA 10.66, was subcloned into M13 and sequenced. This sequence encodes human IL-13.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    An approx. 400 bp DNA fragment derived from a Pst/PvuII restriction
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Interleukin-13; lymphokine; P600; immunological disorder; therapy;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        7;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Length 131;

Muteins 1 and 2 (R92793-94) of human interleukin-13 (IL-13) contain amino acid substitutions at amino acid position 11 in helix A and/or at position 64 in helix C. They are obtd. by site-directed mutagenesis of natural IL-13 sequences. The muteins antagonise the activity of IL-13 or IL-4. They have partial cytokine agonist activity, exhibit less than 80% maximal agonist activity of natural IL-2, and/or antagonize cytokine activity by least about 50% when present at a 100-fold excess. They and other cytokine muteins (see also R92790-92, R92795-802) are useful in the screening of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             22 PVTPSPTLKELIEELVNITQNQ-ASLCNGSMVWSVNLTAGMYCAALESLINVSDCSAIQR 80
